

Visma.net Advanced Logistics

This product matrix provides a detailed overview of all the functionality available within Visma.net Advanced Logistics.

Functionality	Description
Visma.net Advanced Logistics	
Multiple warehouse management	Manage multiple warehouses with location-specific inventory quantities, allocations, and costs. Place orders to a central warehouse and redistributes the inventory to your warehouses automatically.
Cycle stock counting	Cycle counting makes optimising the inventory counting process easier and provides more reliable numbers, instead of performing a full physical count at the end of the year.
Advanced inventory replenishment	Generates purchase orders based on the inventory stock level and replenishment algorithms like moving average method or seasonality forecasting.

All functionalities are available in Norway, Finland, Sweden and the Netherlands.
