

Visma.net Consolidation

This product matrix provides a detailed overview of all the functionality available within Visma.net Consolidation.

Functionality	Description
Visma.net Consolidation	
Consolidation	Consolidation of several companies into one report.
Multi-currency reporting	Reporting in various currencies. (Revalue General Ledger accounts that are dominated in foreign currency. Before closing the financial period, you can run the revaluation process to compute and create the auto-reversing adjusting entries for unrealised gains and losses.)
Analytics reports	Create your own reports for consolidation overview.
Financial Statement Translation	Triangulation and revaluation of currency.

All functionalities are available in Norway, Finland, Sweden and the Netherlands.
